"A Myth or a Fantasy," is a legendary tale where a hero commands a single sword and a spirit creature to defend the people, which has been passed down among the people of Calysa. After an ancient time, the human society became scattered and diverse, and the Lands Between was created as the gap between the human world and the world of spirits. On the Lands Between, heroes and dragon slayers gathered to protect the world of mankind

and gained allies in the forms of various spirits. Since then, the Lands Between has been a land of fantasy and a place of mystery. With various races, creatures, and spirit tribes, the Lands Between is a world with its own magic and unique charm. As the story goes on, the Lands Between has become dominated by the race of dwarves. However, the Elden Ring has existed on the Lands Between for some time, and it was your family that protected and carried on the tradition of the legendary Elden Ring. You will choose your own path in the Lands Between and develop the battle power and role of a leader. Rise, Tarnished, and become an Elden Lord in the Lands Between.

@Facebook @Tumblr Ok...Elden Ring is getting big and presents an upcoming release in the publishing industry that shall be reviewed about in the upcoming months. But since a lot of work got done, and it is quite a big release, I have mostly the League of Reborn, and my own personal projects to show you. Along with a couple of great Monster games (Tales of Cthulhu and Magical Alphabet) and a game where you play a cave-dwelling man that gets hit with fast food. So here are a couple of screenshots. (Ta-da!) Item: ♥ Books As requested by Patreon, some nice Books are coming in. Go go go! The third (2nd if you discount the app) of three, "The Cathedral" is already out for a bit of a review. (Please give me the review!) If you read the first two, start reading here. It takes to the same place, but you get a nice collection of books. Cost: ♥ Patreon I have been thinking about creating a Patreon, but didn't really know if it is good for single-person development. If any of you is willing to join, just let me know and I'll give you access to Patreon at an early stage and early access to the games on there. Then you can leave a nice review and your name

OnRPG "If you've yet to play a fantasy RPG, you won't get this one. "The Legend of Heroes" really does feel like the first-ever modern fantasy RPG. This game really is deep-ranging. There are many actions per minute (APM) and this is something that I truly appreciate. If you're looking for a new class or stat system, this is definitely a title for you. It has quests, sidequests, battles, custom moves, learning, multiple languages, multiple classes, a pantheon (bosses) and a canon (stories). We reviewed brain single photon emission computed tomography (SPECT) studies of patients suspected of suffering from visual dysfunction. SPECT studies often showed profound vascular or neurometabolic disturbances in otherwise normal cortex. This prompted us to review these findings in more detail. Our review includes the following issues: (a) reading, (b) scintillating scotomas, (c) visual agnosia, (d) form and motion perception, and (e) dysexecutive syndrome. In contrast to purely visual imagery, the latter syndrome of disturbed function has not been clearly delineated either in anatomical or in physiological terms. SPECT studies showed that, compared to controls, these patients exhibited functional disturbances in the prefrontal cortex and in the cingulate

gyrus. They had no hemodynamic differences in the occipital cortex. These findings were independent of the disorder's presence or absence. When compared to controls, the patients with dysexecutive syndrome had reduced blood flow in the left prefrontal cortex and in the angular gyrus. The decreased occipital activity in one patient was found to be caused by a lesion in the right hemisphere. In a patient with a right-sided visual agnosia, a lesion in the right temporal lobe was responsible for her visual agnosia. Our patient with scintillating scotoma, however, suffered from bilateral occipito-temporal lesions. A combination of anatomical MRI and functional SPECT has revealed specific patterns of lesion localization, which will allow a more focused exploration of the mechanisms underlying these syndromes, which might be widespread in the brain.
