There are a number of new features included in Lightroom 5, including Photo Bin, a new type of smart storage space for your images. It is still a convenient way to visually organize the images you have created with Lightroom, and to make them easier to find and access in future projects. And it is quite powerful, as you can combine various Photo Bin settings and have them automatically applied to every individual image and not only to a certain group of images. Although Lightroom has always had a few odd quirks and annoyances, I would rather prefer it over other open-source products that lack meaningful integration with advanced editing features. It doesn't really matter to most photographers, since the major issue is which piece of software you like the most and for the particular use case your workflow needs to be focused on. After all, everyone has his or her own priorities and preferences. Lightroom simply happens to be the most popular. It is after all, both inexpensive and easy to use. In addition to the new kind of smart storage system, this version of Lightroom adds an auto-accelerate feature, an improved lens correction tool along with new presets by Van Alkemade. The new preset tool will be very appreciated by photographers. It is considerably better than the one in Lightroom 4. What is also interesting is the Crop tool, which includes a new Flex Grid feature. With this new tool, you can use the grid to crop and frame photos in ways never possible before. Before, you were able to create a crop with a selection window, but the crop was not flexible or ready-made. Using the grid means not only that you will not have to stick to the usual 3×3 grid. The new tool also allows you to include or exclude a certain portion of the image.

Not at all, but Trigger is certainly a good camera editing software if you shoot a lot with one camera. Click here for more details on how to get started editing with Trigger. If you've been using the Retouch feature in Photoshop since before Adobe bought it from Alias and before version CS6, you've undoubtedly seen the new feature called Jagged/Smooth Edges.
